

Attachment Theory and Therapy

Overview: This course will review attachment theory and will introduce students to various models for treating attachment disordered children. The fundamentals will be reviewed of some of the more well known attachment treatments such as: "Dyadic Development Psychotherapy", "Floortime", "Watch, Wait and Wonder" and "Modified Interaction Guidance".

Learning Objectives:

- 1) Define the symptoms of attachments disorders
- 2) Describe the history of attachment theory
- 3) Articulate some of the fundamentals underlying different attachment treatment methods
